Powerlite® IPL removes unwanted hair growth forever!

Powerlite® IPL removes unwanted hair growth by using intense pulsed light (IPL). The light destroys the hair follicle so that no new hair can grow. **Powerlite® IPL** fast, safe and gives permanent hair reduction after just a few treatments. The treatment can be done both in the face and on the body.

Powerlite® IPL has been on the market for over 10 years and today we have more than 1.5 million hair free customers.

Powerlite® IPL is a scientifically proven and safe method for removing unwanted hair growth.

Powerlite® IPL gives fast, safe and effective treatments.

Apart from removing your hair you will also benefit from an effective production of new collagen and elastin which gives you a healthier and fresher looking skin.

POWERLITE®

WHEN YOU WANT RESULTS

Powerlite® IPL destroys hundreds of hair follicles in less than a second with the intense pulsed light. The light is absorbed by the pigments in the hair and the hair follicle and transforms to heat. The Protein in the hair and hair follicles that are in the active, anagen, phase is destroyed with the result that no new hair will grow there.

After two treatments

Number of treatments

In general 4-8 treatments are needed to remove all hair growth. This is due to that the hair needs to be in the growing, anagen, phase to be affected. Around 20% of all hairs are in this growing phase which changes in cycles of a few months at a time. The treatment does not hurt, though some describe a small sting while most consider the treatment to be totally painless.

Powerlite® IPL has gone through product development, tests, scientific research, and follow-up, all in close cooperation with medical doctors and skin therapists. It is one of the brands that has been the longest on the market.

Powerlite® IPL is medically certified.

Powerlite® IPL - the natural choice when you want results.

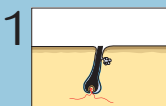

**RECOGNISED, ACCREDITED
AND RELIABLE.**

Permanent hair removal

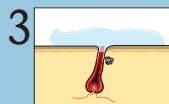

Step by step:

Your unwanted hair growth is shaved before the treatment.

With Powerlite® IPL harmless, long waved light is applied to the skin. The light is transformed to heat energy.

The heat destroys the protein in the hair cells and hair follicles that are in the growing phase.

After one to three weeks the hair will fall off, and no new hair will be able to grow from that follicle.
